Introduction

About Growing Up in Ireland

Growing Up in Ireland (GUI) is the national longitudinal study of children and youth in Ireland. It began in 2006 with two nationally representative cohorts of children: one aged 9 years (Cohort '98) and the other aged 9 months (Cohort '08) at the time of the first interview. In 2024, a new Cohort '24 was launched with a new group of infants aged 9 months. After the first interview at age 9 years, the same children and families were followed up at age 13, 17/18 and 20 years. This survey at age 20 is the focus of this publication. Note there have been, to date, two subsequent waves of data collection with Cohort 98: a special COVID online survey in December 2020 when they would have been around 22 years old and a follow-up survey at age 25 in 2023/24.

About this document

This document contains the frequency tables from the Anonymised Microdata File (AMF) version of the dataset lodged with the Irish Social Science Data Archive (ISSDA) in respect of the Parent/Guardian and Young Adult respondents to the Growing Up in Ireland survey for Wave 4 of Cohort '98 that was conducted in 2018/19. They were aged 20 years old at the time. While the tables are organised according to the sequence of questions in the [Parent/Guardian Main Questionnaire](#), [Parent/Guardian Self-Complete Questionnaire](#), [Young Adult Main Questionnaire](#) and [Young Adult Self-Complete Questionnaire](#), note that the preparation of data for the AMF means that not all variables are included on that file, and some answer options are modified or combined for anonymisation purposes. In addition, some long tables have been replaced with median statistics to reduce the length of this document. Excluded or modified tables may be available to view in their original form on the 'Researcher Microdata File', for which applications should be made to the Central Statistics Office. **This document should be viewed in conjunction with the corresponding questionnaires in order to provide the utmost clarity.**

The variables presented in this booklet have been weighted according to the appropriate cross-sectional weight on the AMF. The original AMF dataset and the accompanying technical documentation are available from the Irish Social Sciences Data Archive [Growing Up in Ireland \(GUI\) Cohort '98 \(Child Cohort\) Wave 4 - 20 years, 2019 - Growing Up in Ireland Cohort '98](#).

The design report outlining the procedures and rationale for this wave can be accessed at the following link: <https://www.growingup.gov.ie/pubs/20Yr-Design-Report.pdf>.

Authors' note: This publication is intended as a guide only. As it is not unusual for datasets to be updated from time to time, it is recommended that readers consult the latest version of the AMF files in ISSDA for the most up-to-date data.

A Note on How to Read the Tables

No Answer

Many questions will display the row “No answer” as observed in the table below:

Person 3 sex Wave 4 Grid					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Male	3946	76.0	86.0	86.0
	Female	645	12.4	14.0	100.0
	Total	4591	88.5	100.0	
No answer		599	11.5		
Total		5190	100.0		

This row covers respondents who refused to answer that question, didn’t know how to answer or the question was not applicable. For the above question, it is likely that the majority of the “No answer” responses come from households with only a Primary Caregiver and a Young Person and no 3rd person.

Understanding the Different “Percent” Columns

Person 3 sex Wave 4 Grid					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Male	3946	76.0	86.0	86.0
	Female	645	12.4	14.0	100.0
	Total	4591	88.5	100.0	
No answer		599	11.5		
Total		5190	100.0		

The percent column displays each response category as a percentage of the total sample; in this case, only 88.5% (4,591 participants) of the total sample (5,190 participants) answered the question and 11.5% (599 participants) did not. The valid percent column displays each response category as a percentage of the participants that responded to the question (i.e., as a percentage of the 4,591 participants who answered “male” or “female”). The cumulative percent column displays a running sum of the valid percent.

Routing

Some questions are a result of routing, whereby they are only answered by participants who gave a certain answer on a preceding question. Not all routed questions are identified in the document, so if there is a large number of “No answer” responses for a question, it is possible that it is a result of routing and it would be advised to consult the questionnaire. An example below:

A6. Do you belong to any religion?					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Yes	3679	70.9	71.0	71.0
	No	1502	28.9	29.0	100.0
	Total	5180	99.8	100.0	
No answer		10	.2		
Total		5190	100.0		

A7. Which religion do you belong to?					
		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	Christian	784	15.1	21.3	21.3
	Roman Catholic	2831	54.5	77.0	98.3
	Other	63	1.2	1.7	100.0
	Total	3678	70.9	100.0	
No answer		1512	29.1		
Total		5190	100.0		

As 1,502 participants answered “No” to question A6, they were instructed to skip question A7. The remaining 10 “No answer”s for Question A7 are likely made up of the 10 “No answer” responses highlighted in Question A6, who either missed the questions or declined to answer for some unknown reason.

Multiple Choice Questions

Some questions are multiple choice questions. In those instances, responses will be formatted as below, where the question (in this example B3) will be displayed prior to any tables. The tables will then represent each response option, with a letter (example: B3a, B3b) for each option.

B3. Please look at this card and tell me, for each item listed, how much confidence do you have in them, is it a great deal, quite a lot, not very much or none at all?

B3a. The church - How much confidence in					
		Frequency	Percent	Valid Percent	Cumulative Percent
